Q.41 Read the passage and answer the questions:

The Making of the

Constituent Assembly

Rajendra Prasad's role was as President of the Assembly, where he had to steer the discussion along constructive lines while making sure all members had a chance to speak. Besides this Congress trio, a very important member of the Assembly was the lawyer and economist B.R. Ambedkar. During the period of British rule, Ambedkar had been a political opponent of the Congress; but, on the advice of Mahatma Gandhi, he was asked at Independence to join the Union Cabinet. Serving with him were two other lawyers, K.M. Munshi and Alladi Krishnaswamy Aiyar, both of whom gave crucial inputs in the drafting of the Constitution. These six members were given vital assistance by two civil servants. One was B. N. Rau, Constitutional Advisor to the Government of India, who prepared a series of background papers based on a close study of the political systems obtaining in other countries. The other was the Chief Draughtsman, S. N. Mukherjee, who had the ability to put complex proposals in clear legal language. Ambedkar himself had the responsibility of guiding the Draft Constitution through the Assembly. This took three years in all, with the printed record of the discussions taking up eleven bulky volumes. But while the process was long it was also extremely interesting. Q.46 Read the passage and answer the questions:

Agrarian

Relation: Crops

Agriculture was organised around two major seasonal cycles, the kharif and the rabi. This would mean that most regions, except those terrains that were the most arid or inhospitable, produced a minimum of two crops a year, whereas some, even gave three crops. For instance, we are told that the Mughal provinces of Agra produced 39 varieties of crops and Delhi produced 43 over the two seasons. Bengal produced 50 varieties of rice alone. However, the focus on the cultivation of basic staples did not mean that agriculture in medieval India was only for subsistence. We often come across the term jins-i kamil in our sources. The Mughal state also encouraged peasants to cultivate such crops as they brought in more revenue. Crops such as cotton and sugarcane were jins-i kamil par excellence. Cotton was grown over central India and the Deccan plateau, whereas Bengal was famous for its sugar. Such cash crops would also include various sorts of oilseeds (for example, mustard) and lentils. This shows how subsistence and commercial production were closely intertwined in an average peasant's holding. During the seventeenth century several new crops from different parts of the world reached the Indian subcontinent. Maize (makka), for example, was introduced into India

via Africa and Spain and by the seventeenth century it was being listed as one of the major crops of western India. Vegetables like tomatoes, potatoes and chillies were introduced from the New World at this time, as were fruits like the pineapple and the papaya.

Q.50 Read the passage and answer the questions:

Agrarian

Relation: Crops

Agriculture was organised around two major seasonal cycles, the kharif and the rabi. This would mean that most regions, except those terrains that were the most arid or inhospitable, produced a minimum of two crops a year, whereas some, even gave three crops. For instance, we are told that the Mughal provinces of Agra produced 39 varieties of crops and Delhi produced 43 over the two seasons. Bengal produced 50 varieties of rice alone. However, the focus on the cultivation of basic staples did not mean that agriculture in medieval India was only for subsistence. We often come across the term jins-i kamil in our sources. The Mughal state also encouraged peasants to cultivate such crops as they brought in more revenue. Crops such as cotton and sugarcane were jins-i kamil par

excellence. Cotton was grown over central India and the Deccan plateau, whereas Bengal was famous for its sugar. Such cash crops would also include various sorts of oilseeds (for example, mustard) and lentils. This shows how subsistence and commercial production were closely intertwined in an average peasant's holding.
